

WatchMan Product Description & Features

Movie + web-series discovery platform | Product overview

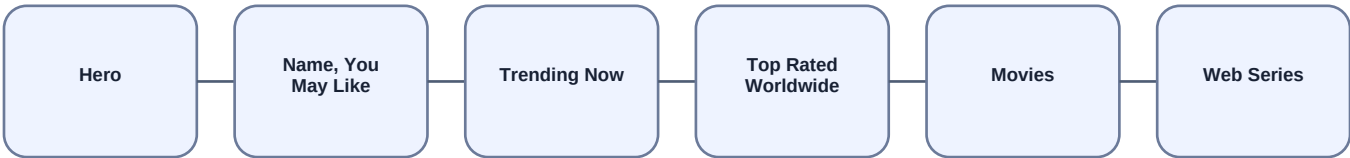

Product overview

WatchMan is a movie and web-series discovery platform centered on browsing, search, content details, saved items, ratings/reviews, watch history, profiles/preferences and personalized recommendations.

Core features

Feature	Description
Movie discovery	Unified movie catalog with filtering, sorting and pagination.
Web-series discovery	TV/web-series catalog using the unified content architecture.
Search	Paginated movie/web-series search.
Trending	TMDB-backed trending discovery.
Top Rated	Worldwide top-rated discovery.
Details	Story, metadata, genres, cast/crew, trailers/videos, ratings and reviews.
Saved content	Authenticated save/remove operations.
Watch history	Viewing history/progress used for personalization.
Profile & preferences	Profile data and favorite/disliked genre preferences.
Recommendations	Hybrid content embeddings + ALS + popularity/freshness + hybrid ranking.
Theme	Light, Dark and System theme selection.

Homepage hierarchy

The personalized recommendation section is **directly below the Hero**. It is not above the Hero and should not show fake personalization for cold-start users.

Implementation boundary

Movies and Web Series remain DB-backed. Like and Must Watch / Timepass / Skip community voting are deferred. OTT/provider discovery and additional details enrichment are part of the current product direction and should use TMDB through the backend.

Source note: based on the current WatchMan architecture/codebase audit and latest product decisions.
